

Consensus Statement and Signatories

“Repealing the ACA without a replacement plan in place that keeps people covered with affordable, high-quality insurance will severely disrupt important progress in improving the quality and reducing the cost of care.

“Nobody can have high quality care if they can't get care in the first place. The ACA's expansion of coverage, including a Medicaid program with comprehensive benefits, is an essential component of those efforts.

“We urge all policy makers to ensure - particularly for low-income individuals, children and families – that robust coverage, quality improvement, and a focus on continuing to drive the movement towards high value, comprehensive, and coordinated care remain at the heart of our American health care policies.”
